

# Density

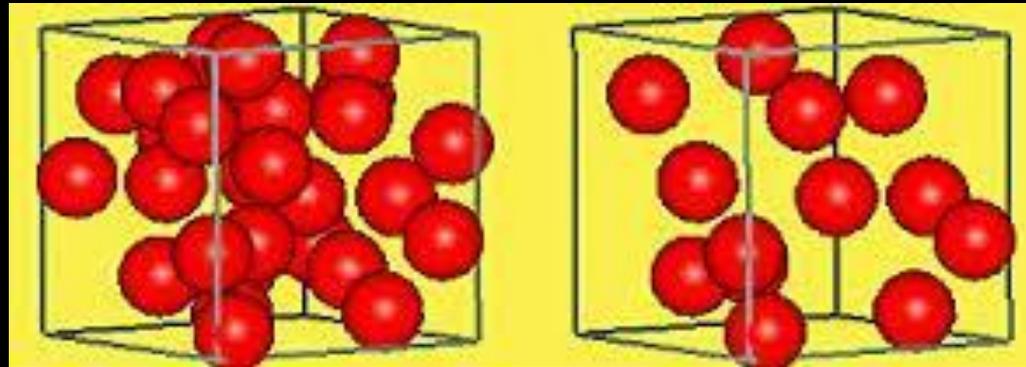

# Density

**Density = mass per unit volume** (density = “per” expression)

**Density = A Derived, not basic unit**

$$\text{Density} = \frac{\text{mass}}{\text{volume}} \quad D = \frac{m}{v}$$

**Density is a physical property of substances.**

**A measurement of how much “Stuff” is in a unit volume**

# Significance of Density

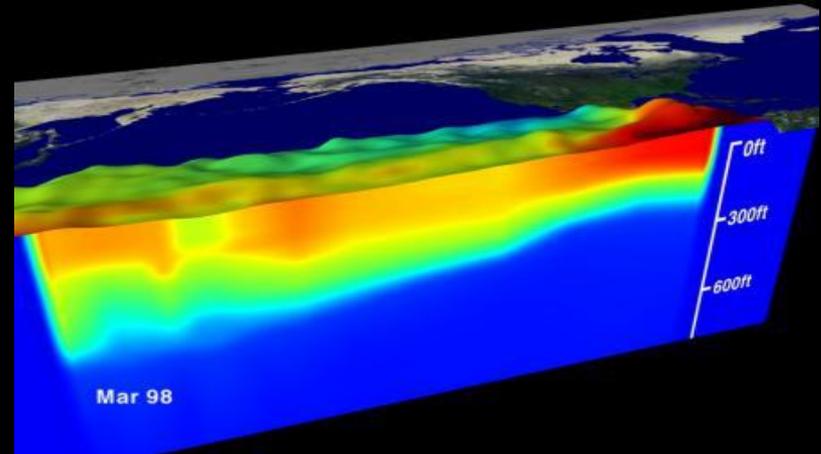

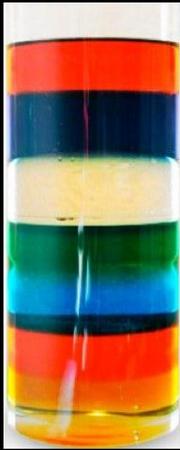

## Fluids Layer Based on Density

May be based on chemical composition

Salt water more dense than fresh

Cold water more dense than warm

Fluids of different density resist mixing

## Moving thru halocline

## Water layers by temperature

Glacial melting is altering Arctic water density-driven-currents

Potential to destroy the Atlantic Gulf Stream (force an Ice Age)

# Visible Bubbles Decrease Density of Liquids (Gases less dense than liquids)

**Methane bubbles from volcanic vents, especially in the Mid-Atlantic  
Some believe some ship losses can be from encountering “mega-bubbles”**

# Star Trek Special Effects: Transporter

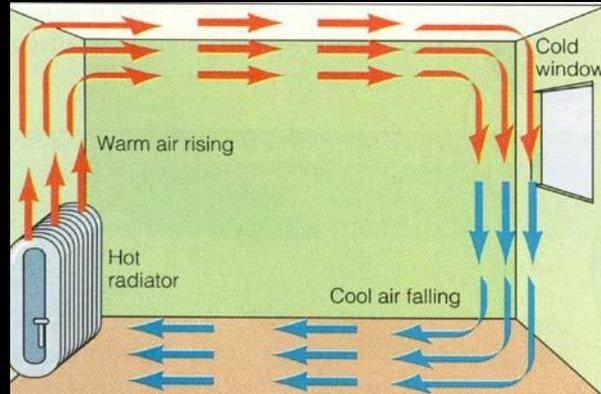

**Swirling mix of salt water, fresh water, and metallic flakes**

# Warm Fluids Typically Less Dense

Lava Lamps

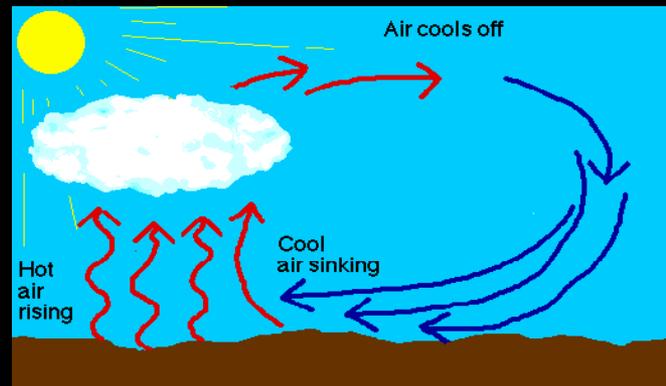

Convection Flow

Galileo  
Air Thermometer

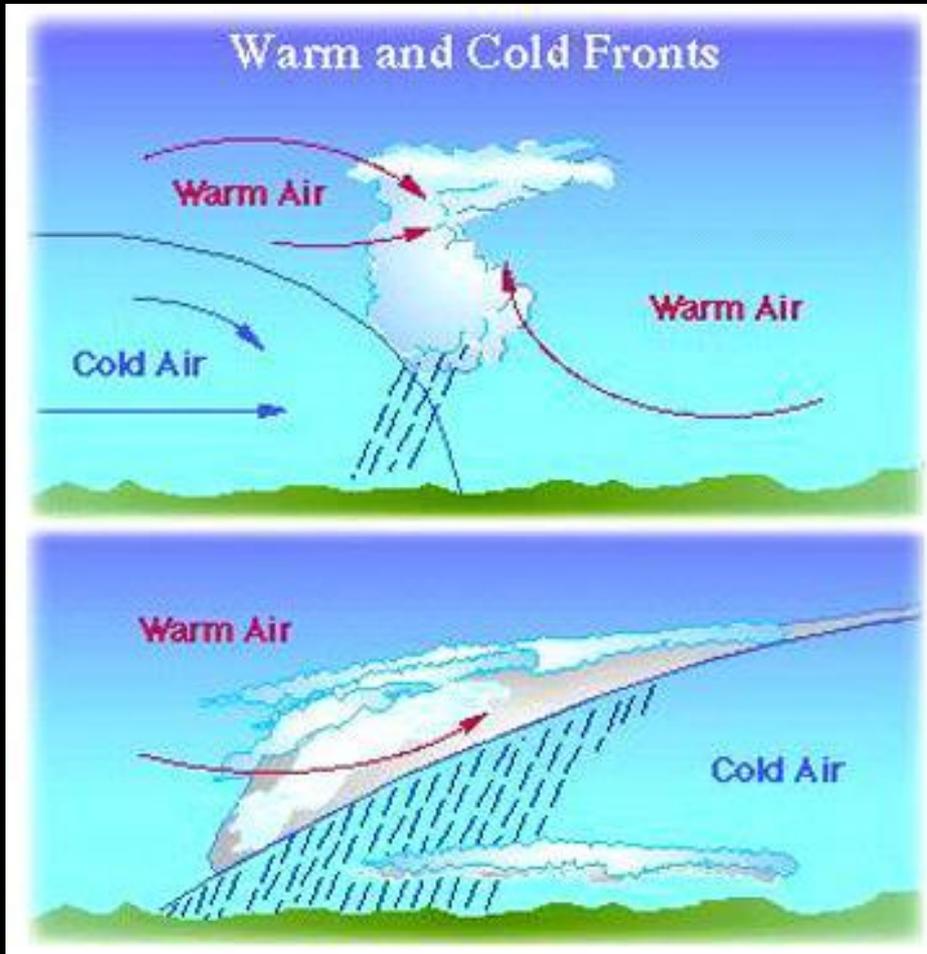

Hot-Air Balloon

Breezes

# Much of Weather is Conflict Between Air Masses

Cold air more dense than warm air

Fluids of different density  
Resist mixing

Barometer

# Position in a Fluid

Depends upon **Relative density**

**Buoyancy Moves up**

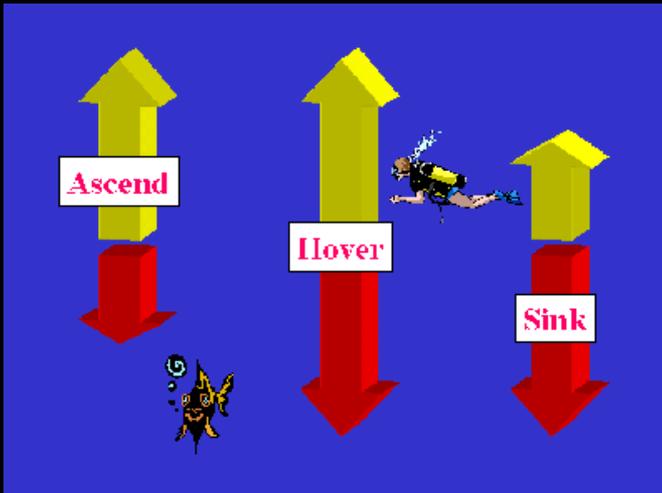

**Gravity Pulls Down**

**Divers, Submersibles, & Water Dwellers**

**Control depth by altering buoyancy**

**Hot air balloons, blimps, & dirigibles**

**Control altitude by altering buoyancy**

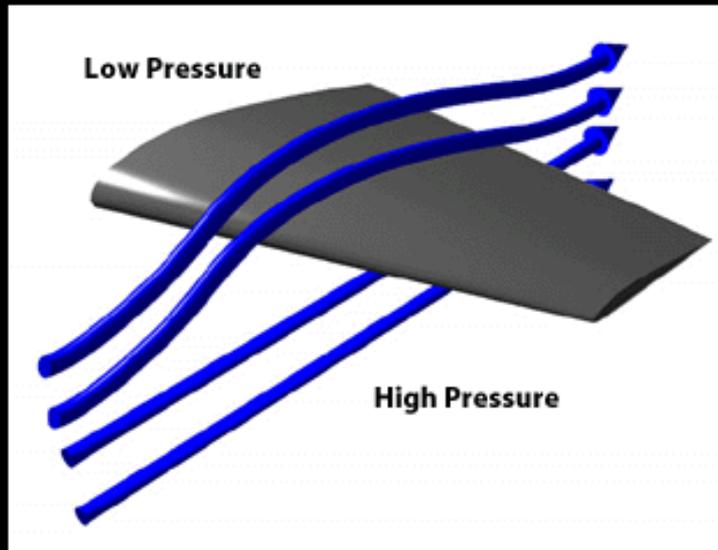

**Archimedes, A Gold Thief, and Buoyancy**

**<http://www-personal.umich.edu/~lpt/archimedes.htm>**

# “Lift”

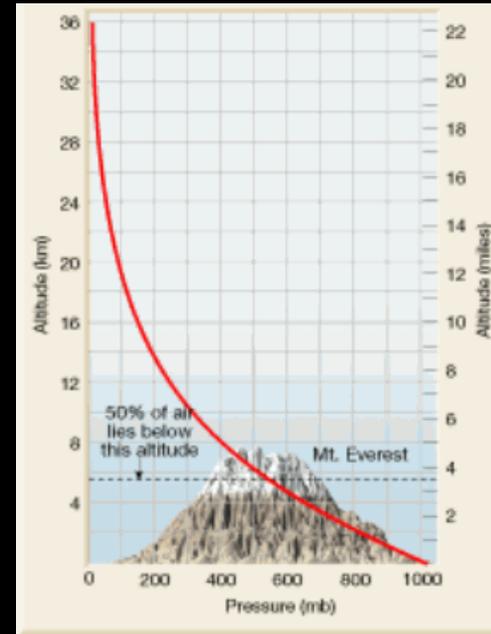

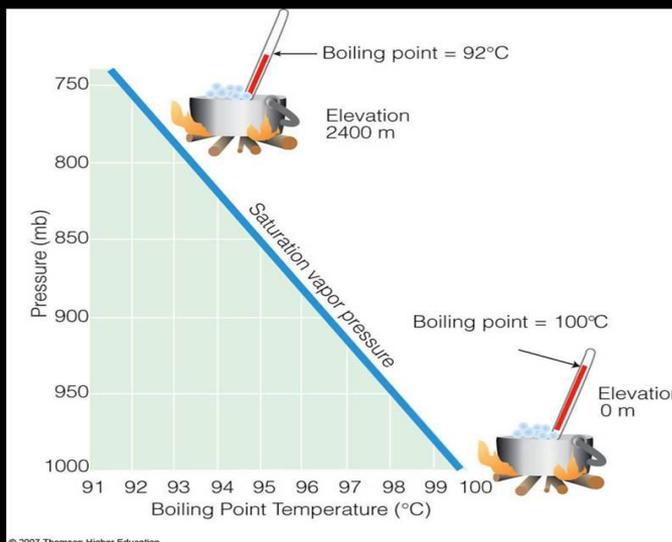

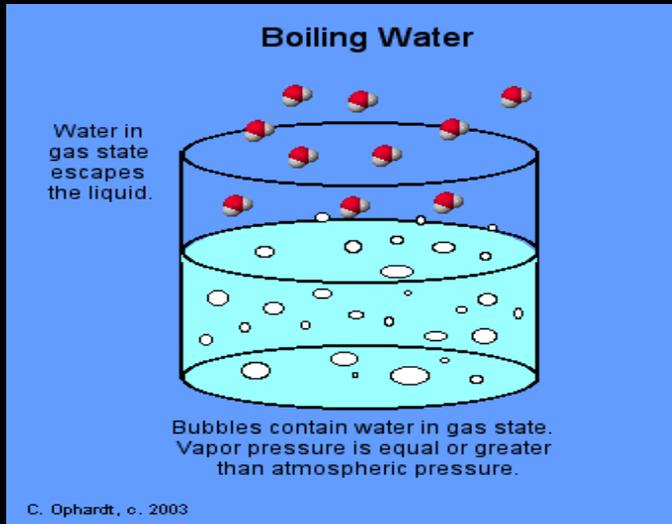

Shape of wing causes rapid air flow on upper surface

Creates density differences above/below wing

**Lower density above wing = lift**

# Boiling Point: Function of Weight of Air

**At high altitudes:**  
**Boiling point water lower**  
**Cooking temperature less**  
**Food takes longer to cook**

# Fat Floats

Weight in-water  
Weight out-of-water

Difference → % Body Fat

Fatty tissue less dense than muscle tissue

**Michigan: 5<sup>th</sup> Most Obese State**  
**By 2030, estimated > 60 % MI will be obese**  
**Type II Diabetes now considered an epidemic**  
**Health care costs → trillions**

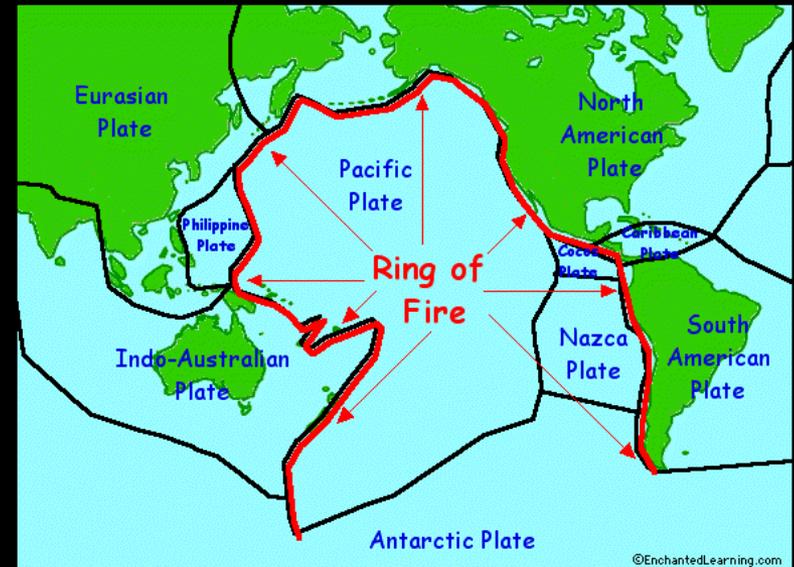

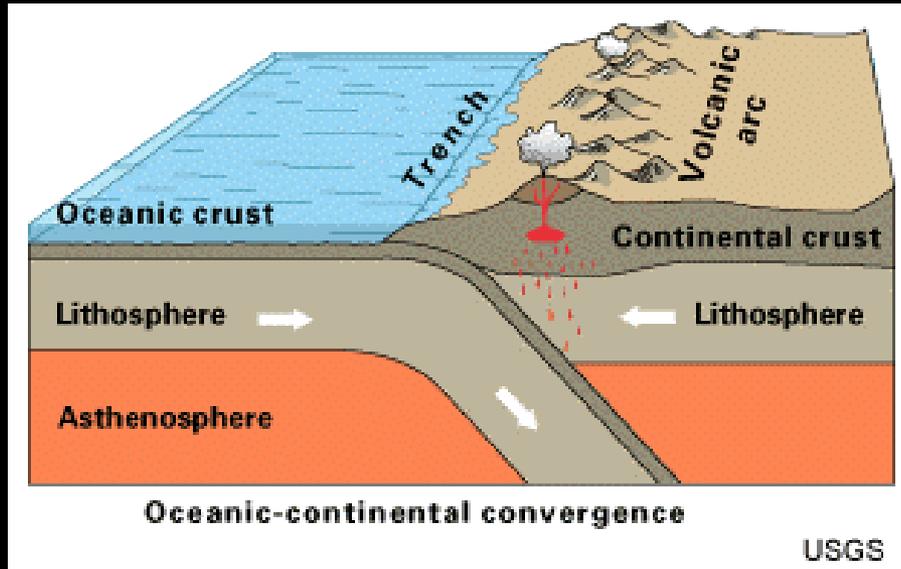

**Sand/Water More Dense than People**  
**Hollywood Horror Movie “Quicksands” Not Likely**

**Sometimes “Hollywood” is not exactly scientifically accurate**

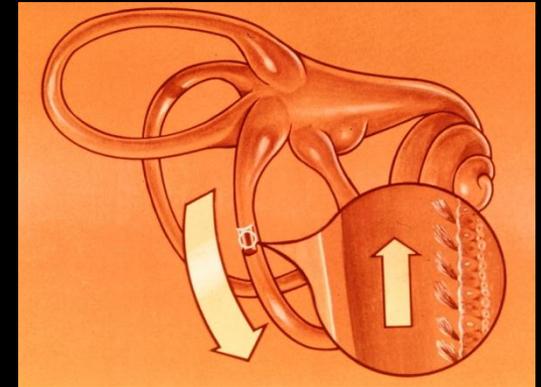

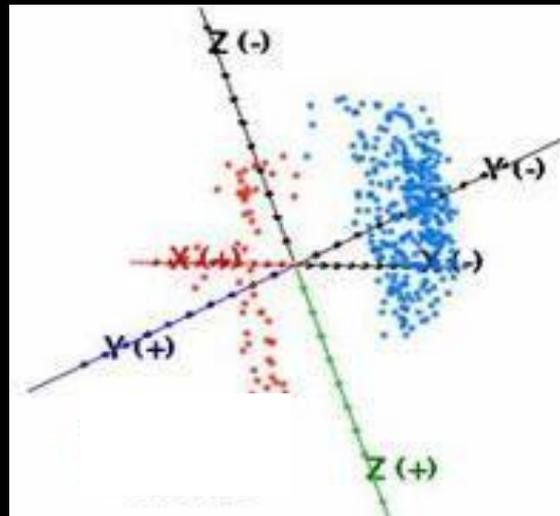

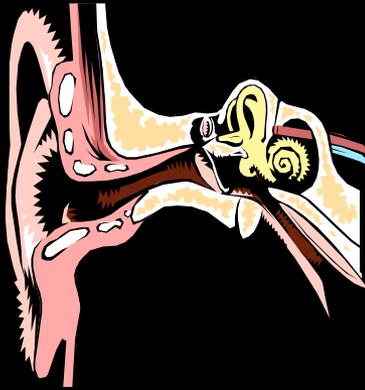

# Continental Crust Less Dense Than Oceanic Crust

**Earthquakes and Volcanoes:  
Driven By Density Differences in Continental Plates**

# Balance Determined by Fluid Motion in Inner Ear

Alcohol alters density of fluid in semi-circular canals

Inner ear is the last organ in the body to clear alcohol  
May take 10-18 hours for alcohol to clear from inner ears

# Depleted Uranium Weapons are NOT Nuclear Devices

Periodic Table

↑  
**Uranium**

**Density (g/mL)**

**Al = 2.70**

**Fe = 7.96**

**Pb = 11.4**

**Hg = 13.53**

**U = 19.07**

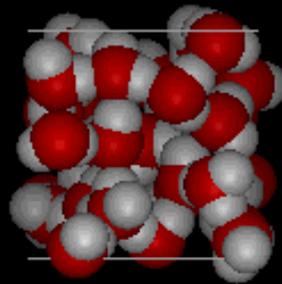

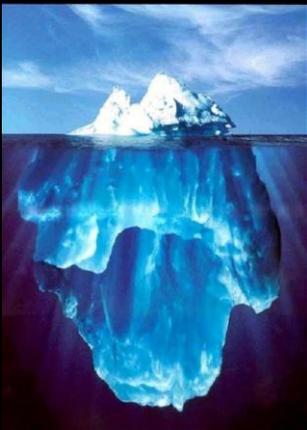

**Au = 19.30**

**Os = 22.67**

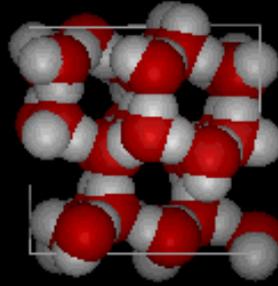

**Kinetic Energy =  $\frac{1}{2} mv^2$**

**Greater density = more momentum on impact**

# Water & Ice

Water

Ice

**Ice less dense than water, so it floats**

**Water has maximum density (1.000 g/ml at 4 °C)**

**If ice did not float, most fresh water critters would not survive winter**

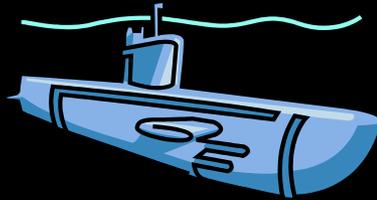

**Form & Function Are intimately related**

**Relative Density  
Controls My Buoyancy!**

# Density Lab

# Lab Measurements

**Always 1 more digit than measuring device**

**Distance (cm) measurements: 2 decimal digits**

**Mass measurements: all decimal digits**

**Volume (ml) measurements: 1 decimal digit (> 10 mL)  
2 decimal digits (10 mL)**

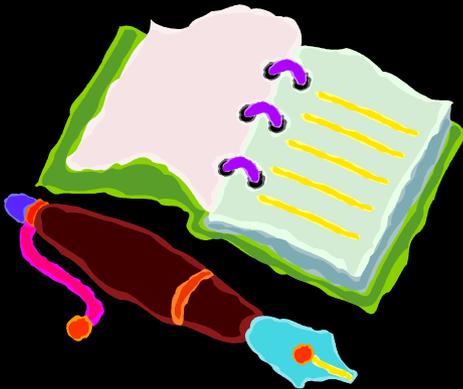

# Lab Notebook Measurements

**Electronic Devices: Record All Displayed Digits**

**Non-Electronic Scales: Record 1 decimal digit beyond scale**

# Today's Lab (Work in Pairs)

## Determine the Density of a Liquid

Each lab pair: use a 10-mL graduated cylinder & a wash bottle

"tare" the balance with graduate cylinder.

Carefully transfer ~ 1 mL of your liquid to the graduated cylinder

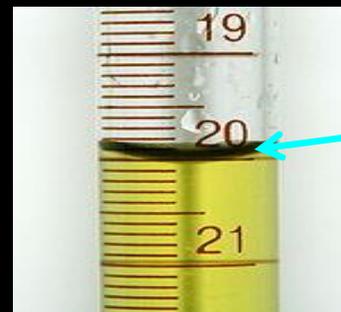

Measure & record the mass & volume of your liquid

Balance: All Digits

10 mL Graduate: 2 decimal places

Repeat 6x, adding about 1 mL each time, until you have ~ 7-8 mL total

Exchange data with the other pair in your group.

Meniscus

Density => Determined by plotting your mass/volume data

# Determine the Density of a Regular Shaped Solid

Use a caliper to measure the diameter of the marble

Record dimensions

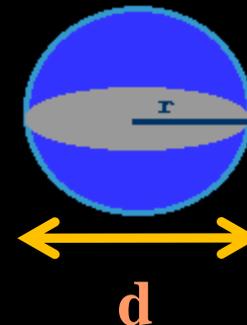

Measure and record the mass of the object

Caliper gives diameter ( $d$ ) of the marble

Density = Mass / Volume

Volume of Sphere =  $\frac{4}{3} \pi (d/2)^3$

$$r = d/2$$

# Determine the Density of an Irregular Shaped Solid

Measure & record the mass of one of the rocks

Measure / record the volume of water in  $\sim 1/2$  filled 100 mL graduate cylinder

Carefully add the object to the graduated cylinder

Measure and record the new water volume.

**Balance: All Digits**

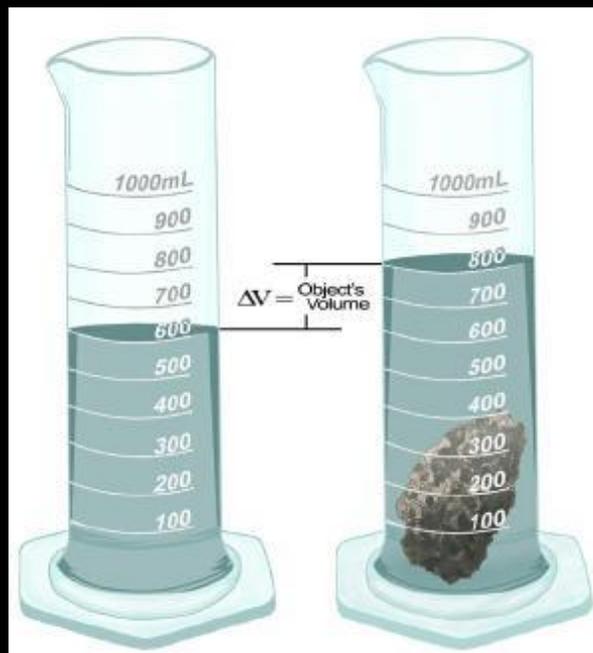

**100 mL Graduate: 1 decimal places**

**Density = Mass / Volume**

**Volume of Object:**

**Volume of water displaced**

# Data:

**Record all your measurements**

**Density of a Liquid**

**Table: mass & volume for the two liquid samples**

**Density of a Regular Solid**

**Record your mass and volume measurements**

**Density of the Irregular Solid**

**Record your mass and volume measurements**

# Calculations

## Determine the Density of a Regular Shaped Solid

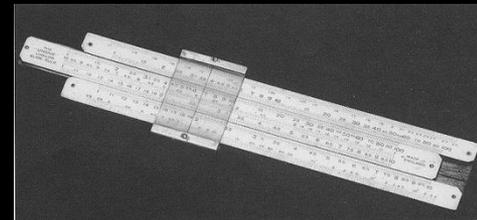

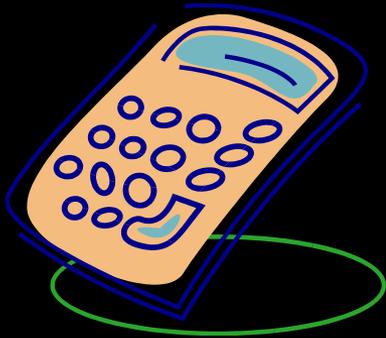

$$\text{Density} = \text{Mass (g)} / \text{Volume (mL or cm}^3\text{)}$$

$$\text{Density} = \text{Mass (g)} / \frac{4}{3} \pi (d/2)^3 \text{ (mL or cm}^3\text{)}$$

(mL or cm<sup>3</sup> is a derived unit)

## Determine the Density of an Irregular Shaped Solid

$$\text{Density} = \text{Mass (g)} / \text{Displaced Water Volume (mL)}$$

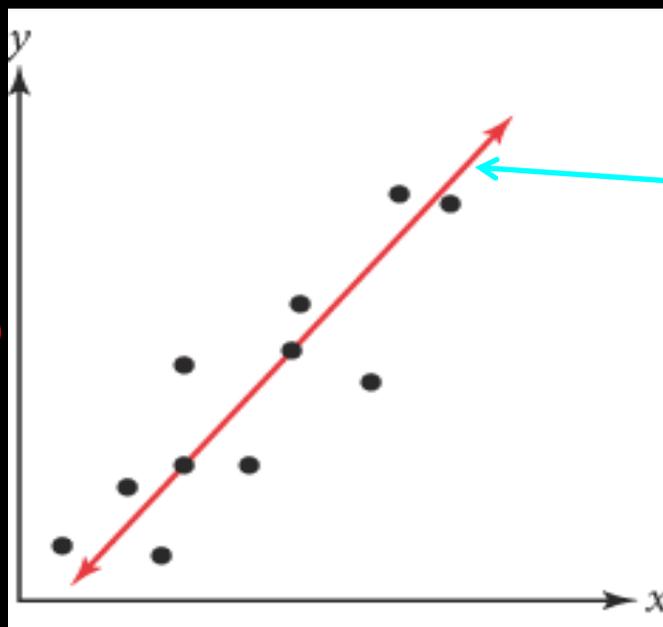

# Calculations (Based on Graph Results)

## For Density of a Liquid

For each of the 2 liquids,  
plot (As a RESULT ... use full page) mass vs. volume

Draw “Best Line” Through your points

One line for each liquid

Mass (g)

Volume (mL)

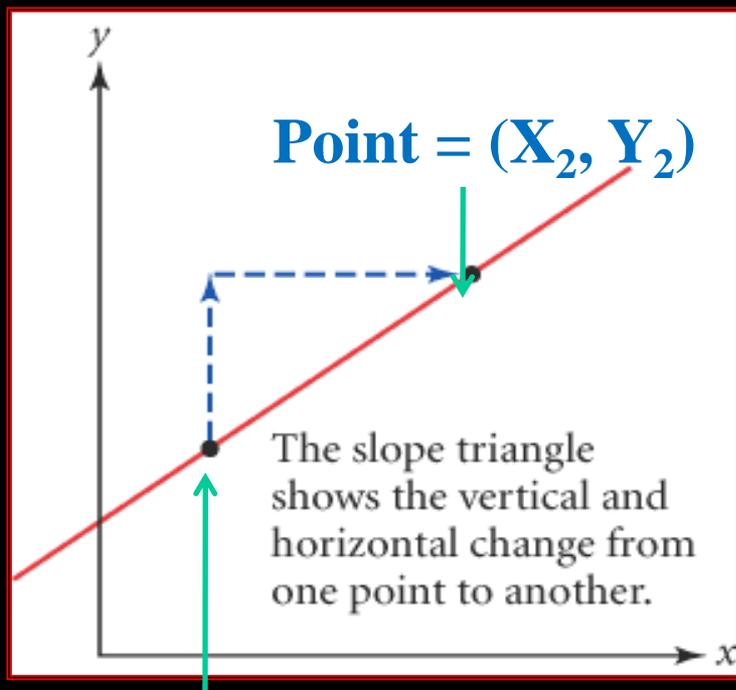

# Calculations (Based on Graph Results)

## For Density of a Liquid

For each of the 2 liquids,

Determine the slope of each “best” line

$$\text{Slope} = \frac{\text{Change in y axis}}{\text{Change in x axis}}$$

$$= \frac{(Y_2 - Y_1)}{(X_2 - X_1)}$$

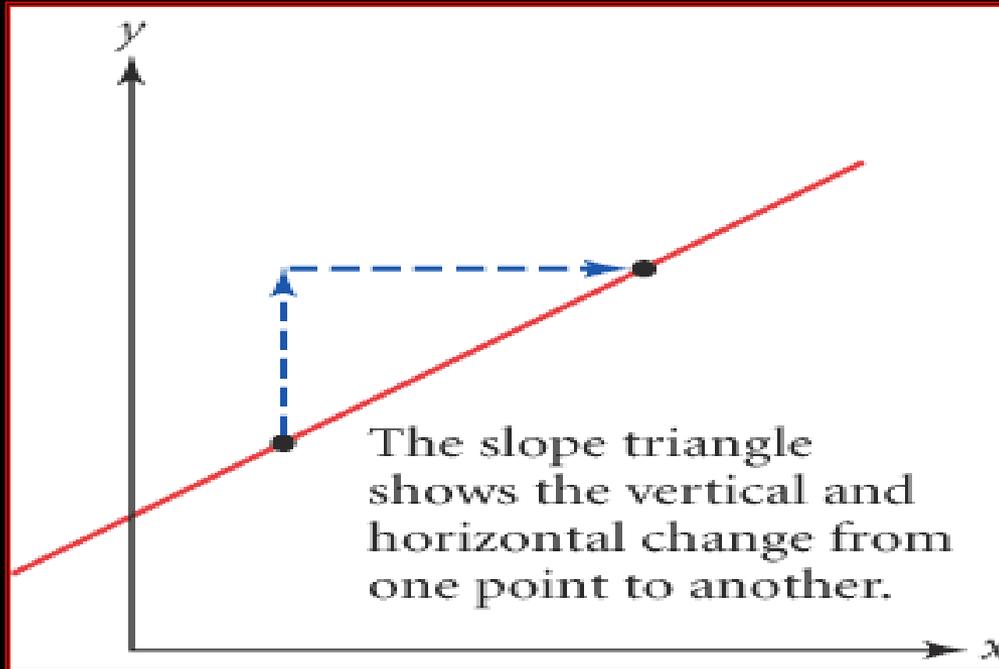

$$\text{Slope} = \text{Mass} / \text{Volume}$$

$$\text{Slope} = \text{Density}$$

$$\text{Point} = (X_1, Y_1)$$

Points from “best” line, not data points

# Calculations (Based on Graph Results)

**When the plot of two variables gives a straight line, the variables are directly proportional**

# Results

Tabulate the densities you calculated for each sample  
Graph Your Density Data

# Conclusion

Does graphical data imply that mass and volume are directly proportional?

Which of the two liquids studied is more dense ?

Infer the identity of your unknown solid

## Rock Sample Densities:

Magnetite 5.00 g/mL

Basalt 3.00 g/mL

Granite 2.90 g/mL
