Density

Density = mass per unit volume (density = “per” expression)

Density = A Derived, not basic unit

$$\text{Density} = \frac{\text{mass}}{\text{volume}} \quad D = \frac{m}{v}$$

Density is a physical property of substances.

A measurement of how much “Stuff” is in a unit volume

Copyright Larry P. Taylor, Ph.D. All Rights Reserved **LPT**

Significance of Density

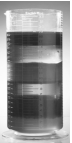

Fluids Layer Based on Density

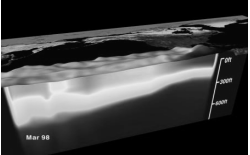

May be based on chemical composition

Salt water more dense than fresh

Cold water more dense than warm

Fluids of different density resist mixing

Moving thru halocline Water layers by temperature

Glacial melting is altering Arctic water density-driven-currents

Potential to destroy the Atlantic Gulf Stream (force an Ice Age)

Copyright Larry P. Taylor, Ph.D. All Rights Reserved **LPT**

Visible Bubbles Decrease Density of Liquids (Gases less dense than liquids)

Methane bubbles from volcanic vents, especially in the Mid-Atlantic
Some believe some ship losses can be from encountering "mega-bubbles"

LPT

Position in a Fluid

**Depends upon Relative density
Buoyancy Moves up
Gravity Pulls Down**

**Divers, Submersibles, & Water Dwellers
Control depth by altering buoyancy**

**Hot air balloons, blimps, & dirigibles
Control altitude by altering buoyancy**

Archimedes, A Gold Thief, and Buoyancy

LPT

“Lift”

Shape of wing causes rapid air flow on upper surface

Creates density differences above/below wing

Lower density above wing = lift

LPT

Fat Floats

Weight in-water
Weight out-of-water

Difference → % Body Fat

Fatty tissue less dense than muscle tissue

Michigan: 5th Most Obese State
By 2030, estimated > 60 % MI will be obese
Type II Diabetes now considered an epidemic
Health care costs → trillions

Water & Ice

Water

Ice

Ice less dense than water, so it floats

Water has maximum density (1.000 g/ml at 4 °C)

If ice did not float, most fresh water critters would not survive winter

Form & Function Are intimately related

Today's Lab (Work in Pairs)

Determine the Density of a Liquid

Each lab pair: use a 10-mL graduated cylinder & a wash bottle

"tare" the balance with graduate cylinder.

Carefully transfer ~ 1 mL of your liquid to the graduated cylinder

Measure & record the mass & volume of your liquid

Balance: All Digits 10 mL Graduate: 2 decimal places

Repeat 6x, adding about 1 mL each time, until you have ~ 7-8 mL total

Exchange data with the other pair in your group.

Meniscus

Density => Determined by plotting your mass/volume data

Determine the Density of a Regular Shaped Solid

Use a caliper to measure the diameter of the marble
Record dimensions

Measure and record the mass of the object

Caliper gives diameter (d) of the marble

Density = Mass / Volume

Volume of Sphere = $\frac{4}{3} \pi (d/2)^3$

$$r = d/2$$

LPT

Determine the Density of an Irregular Shaped Solid

Measure & record the mass of one of the rocks

Measure / record the volume of water in ~ 1/2 filled 100 mL graduate cylinder

Carefully add the object to the graduated cylinder

Measure and record the new water volume.

Balance: All Digits 100 mL Graduate: 1 decimal places

Density = Mass / Volume

Volume of Object:
Volume of water displaced

LPT

Calculations

Determine the Density of a Regular Shaped Solid

$$\text{Density} = \text{Mass (g)} / \text{Volume (mL or cm}^3\text{)}$$

$$\text{Density} = \text{Mass (g)} / 4/3 \pi (d/2)^3 \text{ (mL or cm}^3\text{)}$$

(mL or cm³ is a derived unit)

Determine the Density of an Irregular Shaped Solid

$$\text{Density} = \text{Mass (g)} / \text{Displaced Water Volume (mL)}$$

LPT

Calculations (Based on Graph Results)

For Density of a Liquid

For each of the 2 liquids,
plot (As a RESULT ... use full page) mass vs. volume

Copyright Larry P. Taylor, Ph.D. All Rights Reserved

LPT

Calculations (Based on Graph Results)

For Density of a Liquid

For each of the 2 liquids,

Determine the slope of each "best" line

Point = (X₁, Y₁)

Points from "best" line, not data points

$$\begin{aligned} \text{Slope} &= \frac{\text{Change in y axis}}{\text{Change in x axis}} \\ &= \frac{(Y_2 - Y_1)}{(X_2 - X_1)} \end{aligned}$$

$$\begin{aligned} \text{Slope} &= \text{Mass / Volume} \\ \text{Slope} &= \text{Density} \end{aligned}$$

LPT

Calculations (Based on Graph Results)

When the plot of two variables gives a straight line,
the variables are directly proportional

Copyright Larry P. Taylor, Ph.D. All Rights Reserved

LPT

Results

Tabulate the densities you calculated for each sample
Graph Your Density Data

Conclusion

Does graphical data imply that mass and volume are directly proportional?

Which of the two liquids studied is more dense ?

Infer the identity of your unknown solid

Rock Sample Densities:

Magnetite	5.00 g/mL
Basalt	3.00 g/mL
Granite	2.90 g/mL
